10. Risks & Mitigations

11. Next Steps

1. Executive Summary

MyNextory has built a strong foundation - a content-rich learning platform with journeys, lessons, and a dedicated coaching network serving corporate learners. The opportunity now is to transform this into an **AI-powered personalized coaching engine** that matches the right content to the right learner at the right time.

> *CoachAI is ThoughtWire's proposed intelligence layer that sits on top of MyNextory's existing platform. It uses personality assessment data (EPP), learner behavior signals, and AI-driven content analysis to create individualized learning paths - dramatically reducing the manual effort coaches spend on path planning while improving learner outcomes.*

The Core Promise

Every learner gets a path as thoughtful as if a master coach spent hours studying their personality, strengths, and gaps - delivered automatically, refined continuously, and always explainable to both the learner and their coach.

2. Current State Assessment

What MyNextory Has Today

Asset	Details
Content Library	16 journeys, 46 chapters, 90 lessons, 600+ interactive slides (video, quizzes, reflections, scenarios)
Learner Base	1,500+ registered users across 37 corporate clients
Coaching Network	5 active coaches managing learner relationships
EPP Assessments	400+ learners completed the Criteria Corp Employee Personality Profile (25 dimensions)
Engagement Data	8,000+ backpack saves, 3,300+ ratings, 2,800+ tasks, 67,000+ activity log entries
Onboarding Q&A	Rich qualitative data - learners share motivations, goals, and self-assessments during onboarding

Where the Gaps Are

1. No personalization - All learners see the same content in the same order, regardless of their personality, strengths, or goals

2. EPP data is underutilized - Assessments are collected but not systematically connected to content recommendations

3. Coach bottleneck - Coaches manually decide which lessons to assign, creating inconsistency and limiting scale

4. No adaptive learning - The system doesn't respond to learner progress, engagement patterns, or changing needs

5. Limited analytics - HR leaders lack visibility into cohort progress, content effectiveness, and coaching ROI

6. Content is untagged - Lessons aren't mapped to competencies, difficulty levels, or learning styles

> *The Untapped Goldmine: MyNextory is sitting on exceptionally rich data - personality profiles, behavioral signals, coach observations, and qualitative self-reflections. This data, when properly analyzed and connected, can power a level of personalization that very few*

> *learning platforms achieve.*

3. Proposed Solution: CoachAI

Vision

CoachAI transforms MyNextory from a content delivery platform into an **intelligent coaching partner** that understands each learner as an individual.

How It Works

1	**Learner Assessment** Learner takes EPP Assessment + answers onboarding questions
2	**Profile Intelligence** AI analyzes personality across 25 dimensions. Identifies strengths, gaps, learning style. Generates narrative.
3	**Content Intelligence** AI analyzes every lesson - tags traits, difficulty, style, emotional tone, coaching prompts, prerequisites.
4	**Matching Engine** Scores every lesson against learner profile. Factors in gap-filling, strength-building, pedagogy mode.
5	**Personalized Roadmap** 20-lesson path generated. First 3-5 = discovery phase. Coach reviews, adjusts, locks items.
6	**Continuous Adaptation** Monitors engagement signals. Triggers reassessment on drift. Path re-ranks automatically.

Key Design Principles

✓ **Coach-augmented, not coach-replaced -** AI handles analysis and sequencing; coaches bring human judgment, relationship, and override authority

✓ **Explainable recommendations -** Every lesson comes with a rationale: why this lesson for this learner

✓ **Configurable pedagogy -** Organizations choose gap-filling, strength-leading, or balanced approaches

✓ **Continuous adaptation -** System learns from engagement signals, coach overrides, and periodic reassessments

✓ **Human review gates -** AI-generated content tags go through confidence-gated review before influencing recommendations

4. Full Capability Map

4.1 Learner Intelligence

Capability	Description
EPP Profile Interpretation	Parse 25-dimension personality assessment into structured profiles with strengths, gaps, and narrative summaries
Motivation Cluster Analysis	Extract motivation drivers from onboarding Q&A (intrinsic vs. extrinsic, career growth vs. personal development)
Learning Style Inference	Determine preferred learning modality (visual, reflective, active, theoretical) from personality traits and behavior
Tension Pair Detection	Identify psychologically significant trait combinations (e.g., high Achievement + low SelfConfidence = imposter syndrome risk)
Strength & Gap Mapping	Quantified identification of top strengths (>70th percentile) and developmental areas (<30th percentile)
Profile Versioning	Track how a learner's profile evolves over time through reassessments

4.2 Content Intelligence

Capability	Description
AI Content Tagging	Analyze every lesson's slide content to extract trait associations, difficulty, learning style, prerequisites, and emotional tone
Multi-Pass Confidence Scoring	Two independent AI analyses per lesson, with agreement scoring to ensure tag quality
Confidence-Gated Review	Auto-approve high-confidence tags (>75%), flag low-confidence (<50%) for human review, queue moderate ones
Content-Trait Mapping	Map each lesson to EPP dimensions with directional tags: builds, leverages, or challenges the trait
Semantic Content Search	AI-powered search across all lesson content - find lessons by meaning, not just keywords
Slide-Level Analysis	Per-slide breakdown of content type, engagement potential, and instructional

	approach
Coaching Prompt Generation	AI-generated discussion starters for coaches to use with each lesson
Content Quality Scoring	Automated assessment of lesson relevance, depth, and instructional design quality
Pair Recommendations	Identify which lessons work well together (complementary topics, progressive difficulty)

4.3 Personalized Path Engine

Capability	Description
Content-Learner Matching	Score every lesson against each learner's profile using trait-based similarity matching
Configurable Pedagogy Modes	Three modes: Gap-Fill (70% remedial / 30% strength), Strength-Lead (30% / 70%), Balanced (custom ratio) - configurable per organization
Intelligent Sequencing	Diversity rules: max 3 consecutive same-journey lessons, diminishing returns on repeated traits, interleaved gap/strength content
Discovery Phase	First 3-5 lessons use softer, exploratory framing - lets learners ease in before deeper commitment
20-Lesson Roadmap Generation	Curated sequence with match scores, rationale, and trait coverage for each item
Match Rationale	Human-readable explanation for every recommendation (why this lesson for this learner)

4.4 Coach Empowerment

Capability	Description
Coach Compatibility Signals	Traffic-light assessment (Green / Yellow / Red) of coach-learner fit based on personality alignment
Path Curation Tools	Coaches can reorder, swap, and lock lessons - overrides persist through AI re-rankings
Divergence Detection	When >30% of a path is coach-modified, system flags it as "coach insight" for review
Override Audit Trail	Every coach decision (swap, lock, reorder) is logged with rationale and timestamp
Coach Workspace	Dedicated interface: search learners, view profiles, edit paths, track sessions
Curator AI Copilot	AI assistant that coaches can converse with to understand a learner's profile and get suggestions

4.5 Continuous Adaptation

Capability	Description
Quarterly EPP Reassessment	Scheduled full personality re-evaluation - detects drift and triggers path re-ranking if >15% change
Mini-Assessments	Quick 3-5 question check-ins during the learning journey to capture real-time trait signals
Passive Signal Monitoring	Track backpack saves, ratings, task completions - aggregate patterns trigger automatic reassessment
Profile Drift Detection	Compare current vs. original assessment - quantify how much a learner has changed
Automatic Path Re-Ranking	When significant drift is detected, regenerate recommendations with updated profile - coach notified
Learner Feedback Loop	"This doesn't sound like me" buttons on profiles - direct signal for profile correction

4.6 HR & Leadership Analytics

Capability	Description
Cohort Dashboard	Organization-wide view: all learners, their phases, progress metrics
EPP Heatmaps	Visual trait distribution across the organization - identify company-wide strengths and gaps
Engagement Funnels	Track learner progression through platform stages with drop-off analysis
Content Effectiveness	Which lessons drive the most engagement, ratings, and backpack saves
Coach Performance	Learner progress under each coach, override frequency, path divergence rates
Score Distribution	How well the AI's recommendations match learner profiles across the cohort
Export & Reporting	CSV/PDF export of learner progress, cohort metrics, and coaching activity
Department Filtering	Slice all analytics by company, department, coach, or learner phase

4.7 Learner Experience (Future Enhancement)

Capability	Description
AI Companion Chat	Conversational AI that helps learners reflect, quiz themselves, prepare for coaching sessions, and celebrate milestones
Companion Modes	Context-aware conversation: teach, quiz, reflect, prepare, celebrate
Personalized Greeting	Companion opens with context-aware greetings based on learner's current path position
Interactive Content Viewer	Rich slide viewer with video playback, interactive quizzes, and reflection prompts
Mobile-Responsive Experience	Full learning experience accessible on tablet and mobile devices
Progress Visualization	Visual representation of learning journey - where you are, where you're going

4.8 Platform Intelligence

Capability	Description
Lesson Impact Preview	Before adding/removing a lesson, preview how it would affect existing learner paths
Content Gap Analysis	Identify EPP dimensions not well-served by the current library - guide content creation
Algorithm Observability	Dashboard showing how the matching engine works: formulas, thresholds, weights, traces
Batch Processing	Process all untagged content in bulk - handle new content additions efficiently
Review Queue Management	Workflow for reviewing, approving, correcting, or dismissing AI-generated content tags

5. Phase Breakdown

5.1 Phase 1: Foundation & Data Intelligence

> *Objective: Understand the data, prepare the infrastructure, connect the EPP assessment layer.*

Deliverables

Deliverable	Description
Data Model Analysis	Map all existing tables, relationships, content hierarchies, and user data flows
Content Taxonomy Mapping	Document the journey > chapter > lesson > slide hierarchy with all 68 slide types
EPP Integration Architecture	Design the connection between Criteria Corp EPP data and the AI profiling engine
Database Optimization	Create indexes, views, and query patterns optimized for AI workloads
Schema Extensions	Design new tables for profiles, content tags, recommendations, coaching overrides, and reassessments
Infrastructure Setup	AI engine runtime, API layer, secure credential management

Complexity	Estimated Effort	Duration	Dependencies
Medium	**120-160 hours**	**3-4 weeks**	**None**

Key Output: Data model documentation, schema design, EPP integration spec, infrastructure ready

5.2 Phase 2: Learner Intelligence Engine

> *Objective: Turn raw EPP scores and onboarding data into rich, actionable learner profiles.*

Deliverables

Deliverable	Description
EPP Parser	Extract and normalize 25 personality dimensions from assessment data
Profile Interpretation Engine	AI-powered analysis generating narrative profiles, strengths/gaps, tension pairs
Motivation Analysis	Parse onboarding Q&A to classify motivation drivers and learning preferences
Learning Style Inference	Map personality traits to preferred learning modalities
Profile API	REST endpoints for generating, retrieving, and updating learner profiles
Batch Profiling	Process all 400+ existing EPP-assessed learners in bulk
Feedback System	"Not like me" mechanism for learners to flag inaccurate profiles

Complexity	Estimated Effort	Duration	Dependencies
Heavy	**200-280 hours**	**5-7 weeks**	**Phase 1**

Key Output: Profile engine, batch processing, 400+ learner profiles generated, feedback loop

5.3 Phase 3: Content Intelligence Pipeline

> *Objective: Analyze and tag every lesson in the library so the AI can match content to learners.*

Deliverables

Deliverable	Description
Content Analysis Pipeline	Multi-stage AI pipeline extracting 15 structured fields from each lesson's slide content
Trait-Content Mapping	Tag every lesson with EPP dimensions it builds, leverages, or challenges - with confidence scores
Confidence Gating System	Auto-approve high-confidence tags, queue moderate ones, flag low-confidence for coaching input
Semantic Search Index	AI embeddings for all lesson content - enables meaning-based search
Review Queue	Interface for coaches/admins to review, approve, correct, or dismiss AI-generated tags
Content Quality Assessment	Automated scoring of lesson relevance, depth, and instructional design
Bulk Processing	Tag all 90 lessons with full audit trail

Complexity	Estimated Effort	Duration	Dependencies
Heavy	**240-320 hours**	**6-8 weeks**	**Phase 1**

Key Output: Tagged content library, semantic search, review queue, quality scores

5.4 Phase 4: Personalized Path Engine & Coach Tools

Objective: Generate individualized learning paths and give coaches the tools to curate them.

Deliverables

Deliverable	Description
Matching Algorithm	Score every lesson against each learner's profile using trait-based similarity with configurable pedagogy weights
Path Generation	Produce 20-lesson roadmaps with intelligent sequencing, diversity rules, and discovery phases
Pedagogy Configuration	Per-organization settings: gap-fill, strength-lead, or balanced - with custom ratios
Match Rationale Engine	Generate human-readable explanations for every recommendation
Coach Workspace	Dedicated interface for coaches to search learners, view profiles, and manage paths
Coach Curation Tools	Drag-and-drop reorder, lesson swap, lesson lock - persisting through AI re-rankings
Coach Compatibility Engine	Traffic-light signals for coach-learner fit
Divergence Detection	Flag paths where >30% is coach-modified as "coach insight"
Curator AI Copilot	Conversational AI assistant for coaches to explore learner data and get suggestions

Complexity	Estimated Effort	Duration	Dependencies
Heavy	**280-360 hours**	**7-9 weeks**	**Phase 2, Phase 3**

Key Output: Path engine, coach workspace, curation tools, compatibility signals, AI copilot

5.5 Phase 5: Analytics, Adaptation & Learner Experience

> *Objective: Close the loop with continuous adaptation, leadership analytics, and the learner-facing AI companion.*

Deliverables

Deliverable	Description
HR Analytics Dashboard	Cohort overview, EPP heatmaps, engagement funnels, content effectiveness, department filtering
Quarterly Reassessment Engine	Scheduled EPP retakes with drift detection and automatic path re-ranking
Mini-Assessment System	Quick mid-journey check-ins to capture real-time learning signals
Passive Signal Monitoring	Aggregate engagement patterns to trigger adaptive re-ranking
AI Companion	Conversational learning partner: teach, quiz, reflect, prepare, celebrate modes
Content 360 View	Detailed lesson intelligence view: traits, difficulty, slides, coaching prompts
Algorithm Observability	Diagnostic dashboard: formulas, thresholds, pipeline traces
Reporting & Export	CSV/PDF export of all metrics, learner progress, and coaching activity
Lesson Impact Preview	Dry-run: what happens to learner paths if we add/remove this lesson

Complexity	Estimated Effort	Duration	Dependencies
Medium-Heavy	**240-320 hours**	**6-8 weeks**	**Phase 4**

Key Output: HR dashboard, reassessment engine, AI companion, reporting suite

6. Consolidated Effort Summary

Phase	Name	Complexity	Hours (Est.)	Duration	Dependencies
1	Foundation & Data Intelligence	Medium	120-160	3-4 weeks	-
2	Learner Intelligence Engine	Heavy	200-280	5-7 weeks	Phase 1
3	Content Intelligence Pipeline	Heavy	240-320	6-8 weeks	Phase 1
4	Path Engine & Coach Tools	Heavy	280-360	7-9 weeks	Phase 2, 3
5	Analytics, Adaptation & Learner AI	Medium-Heavy	240-320	6-8 weeks	Phase 4

Total Hours	Total Duration	Parallel Optimization
1,080 - 1,440	**22 - 30 weeks**	**Phases 2 & 3 run concurrently**

7. Technology Approach

- **AI Intelligence Layer**

  Powered by state-of-the-art large language models for content analysis, profile interpretation, and conversational coaching

- **Semantic Search**

  Vector embeddings enable meaning-based content discovery, going beyond keyword matching

- **Deterministic Matching**

  The path generation algorithm uses mathematical scoring (not AI generation) for consistency, speed, and explainability

- **Human-in-the-Loop Design**

  Every AI output passes through confidence gates and human review workflows before impacting learners

- **API-First Architecture**

  RESTful APIs with real-time WebSocket updates for responsive interfaces

- **Existing Stack Compatible**

  Designed to layer on top of MyNextory's existing database and infrastructure without migration risk

Technical Appendix

Component	Technology
AI Engine	Anthropic Claude (content analysis, profile interpretation, coaching AI)
Embeddings	OpenAI text-embedding-3-small (semantic search)
Vector Index	FAISS (fast similarity search at scale)
External Assessment	Criteria Corp EPP API (personality profiling)
API Server	Python / FastAPI (async, high-performance)
Frontend	Lightweight JavaScript (fast load, easy maintenance)
Database	Compatible with MyNextory's existing MariaDB infrastructure
Real-Time	WebSocket connections for live dashboard updates

8. Success Metrics

For Learners

Metric	Target	How We Measure
Path Relevance Score	>70/100 average match	AI scoring algorithm output
Discovery Phase Completion	>60% of learners	Progress tracking
Engagement Lift	>25% increase in saves/ratings	Pre vs. post CoachAI comparison
Profile Accuracy	>85% no "not like me" flags	Feedback button tracking

For Coaches

Metric	Target	How We Measure
Time Savings	70% reduction in path planning	Coach survey + task timing
Override Rate	10-30% (healthy range)	Override audit trail
Curation Quality	Better outcomes in modified paths	Learner progress comparison

For HR / Leadership

Metric	Target	How We Measure
Cohort Progression	>50% active in 90 days	Phase tracking dashboard
Content Utilization	>80% of library matched	Content gap analysis
EPP Dimension Coverage	>90% dimensions addressed	Trait mapping analysis
Reassessment Drift	Measurable change at 90 days	Quarterly EPP comparison

9. What Makes This Different

Traditional LMS	CoachAI
Same content for everyone	Personalized to personality and goals
Coach assigns based on intuition	AI recommends based on 25-dimension analysis
Static path, never adapts	Continuous adaptation from engagement signals
Content is a black box	Every lesson tagged with traits, difficulty, style
"Did they complete it?"	"Did it build the right competency?"
HR sees completion rates	HR sees personality growth, engagement depth, coaching effectiveness
Coach manually researches each learner	Coach gets AI-generated profile + compatibility signals + suggestions

10. Risks & Mitigations

Risk	Likelihood	Impact	Mitigation
EPP data quality varies across learners	Medium	Medium	Confidence scoring on profiles; fallback to Q&A-only profiling
Content library too small for good matching	Low	High	Content gap analysis tool identifies where new content is needed
Coaches resist AI recommendations	Medium	Medium	Coach override tools preserve autonomy; AI positioned as assistant
Learner privacy concerns with personality data	Medium	High	All data stays within MyNextory infrastructure; consent-based
AI errors in content tagging	Low	Medium	Multi-pass confidence scoring + human review queue
Assessment fatigue from reassessments	Low	Low	Mini-assessments (3-5 Qs); passive signals reduce explicit asks
Integration complexity with existing LMS	Medium	Medium	Layered architecture - additive, not replacement
Scope creep across phases	Medium	Medium	Phase gates with explicit review before proceeding

11. Next Steps

1	**Alignment Meeting** Walk through this scope with MyNextory leadership, prioritize capabilities, confirm phasing
2	**Data Access** ThoughtWire will need read access to the production database and EPP assessment data
3	**Phase 1 Kickoff** Begin with data model analysis and infrastructure setup
4	**Coaching Team Interview** 30-minute sessions with 2-3 coaches to understand their current workflow and pain points
5	**Success Metrics Agreement** Align on KPIs before development begins
